

You would like to display the same thing multiple times, but you do not wish to have to re-type it multiple times in your program.

Please print the following text to the screen:

```
C is fun!
```

```
C is fun!
```

```
C is fun!
```

```
We can do everything with it!
```

```
We can do everything with it!
```

```
We can do everything with it!
```

```
We can do everything with it!
```

```
We can do everything with it!
```

Simple, right? So now let's make this more difficult! You are only allowed to use three "printf" statements, and on top of that, you are not allowed to repeat text inside any of your printf statements.

*Warning:* Your output needs to look exactly like the above output.

## Note

You may submit as many solutions as you wish. Only your highest score will be kept.

Remember to declare the variable used in the loop outside the loop in this quiz. So if using variable `i`, declare that it is an integer before starting the loop. This is only so that the grader grades you correctly for this quiz. As you move on with the quizzes in this course you will be able to compress the code by declaring `int` within the loop itself.
