Petra, Rémi and their families went hiking in the mountains together and realized that distances are measured in different units in France and the United States. To help them convert between units, please write a program that reads a decimal number representing a distance in kilometers and that prints out the corresponding distance in miles with 6 decimal places.

You may use the fact that one kilometer equals 0.621371 miles.

Example

Input:

```
4.8
```

Output:

```
2.982581
```

Note

You may submit as many solutions as you wish. Only your highest score will be kept.
